

Measurement Commissioning Support

Wind Pioneers will help oversee the technical aspects of the commissioning of wind measurement system.

1

Review Of The Measurement Device

- Review of the technical and commercial proposals provided to the client and instrumentation procurement quotes
- Comment upon the bankability of the proposed solutions
- Advice on the technical feasibility of the suggested advise measurement systems

Confirmation Of Suitability Of Proposed Locations

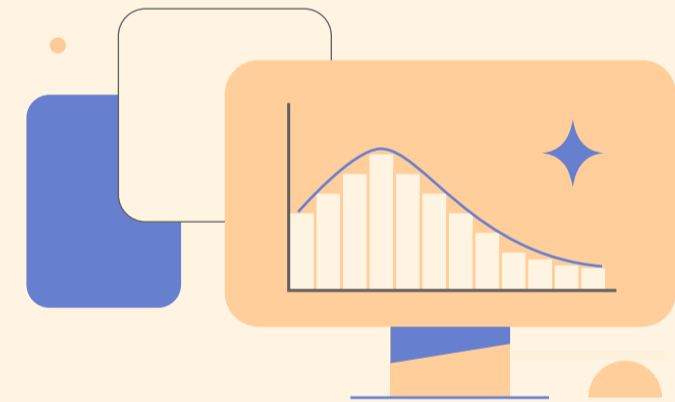

- Comment on capability of creating robust measurement campaign
- Confirm representativeness of the location relative to the entire wind farm
- Confirm the absence of obstacles in the vicinity of the chosen location

2

3

Technical Specification For RS Device Design

- Guide the client to provide technical specifications to the contractors detailing the relevant parameters.
- Review drawings and accompanying design documents provided by the mast-contractor

Remote Review Of Mast/ Remote Sensing Device Commissioning

- Confirm that all instruments are functioning at the time of installation
- Verify that mast/RS device power supply is functioning correctly
- Verify communications flow and initial wind measurements

4

5

Mast/Remote Sensing Device Commissioning Reports

A report of the verification will be generated, including conclusions concerning whether the mast and RSD devices are considered to pass acceptance criteria
